

CPT Dashboard

Insurance & Billing Team Guide

Solrei Behavioral Health, Inc. · Internal Use Only · April 2026

SECTION 1

What Is This Tool?

The CPT Dashboard is an internal dashboard that shows how much each insurance company pays Solrei for each psychiatric service code, compared to the Medicare benchmark rate.

It is designed to help the billing and insurance team quickly identify which payers are underpaying us, estimate the financial impact, and support leadership with data when renegotiating contracts.

 This tool is read-only for the billing team. You can view, filter, and export data, but you cannot change any rates or settings. Rate updates are handled by the administrator.

SECTION 2

How to Access the Dashboard

The tool runs in any web browser on your office network. The administrator must have the server running for the dashboard to work.

To open the dashboard:

1. Open any web browser (Safari, Chrome, or Firefox)
2. Type this address in the address bar and press Enter:
<http://localhost:8000/dashboard>
3. The dashboard will load automatically

 If you see “Could not connect to API” — the server is not running. Contact Dean to start the tool.

SECTION 3

Dashboard Overview

The dashboard has three main sections, displayed top to bottom on the page.

Section 1 — Overview Cards (top of page)

Six summary tiles that give an instant snapshot of your current contract situation:

Card	What It Means
Payers Loaded	Number of insurance companies with rates in the system
CPT Codes Tracked	Number of service codes being monitored (max 12)
Underpaid Codes	How many codes are paid below your 130% of Medicare target
Est. Annual Revenue Gap	Total estimated money left on the table per year across all underpaid codes
Est. Revenue at Target	What you would earn annually if all payers hit the 130% target
Target vs. Medicare	Your negotiation target expressed as a percentage of Medicare (currently 130%)

Section 2 — Payer Summary Table

A row-by-row summary of every insurance company in the system. This is your negotiation priority list.

Column	What It Means
Payer	Insurance company name
Codes w/ Rates	How many of the 12 tracked CPT codes have a contracted rate loaded for this payer
Codes Underpaid	How many codes are below the 130% of Medicare target (shown as a red badge)
Avg % of Medicare	The average rate across all codes as a percentage of what Medicare pays. A bar shows how close to target.
Current Revenue	Estimated annual revenue from this payer at current rates
Revenue at Target	What revenue would be if this payer hit your 130% target
Revenue Gap	The dollar difference — how much more you would earn at target rates. Larger numbers = higher priority.
Actions	Buttons to generate a negotiation letter or export data for this payer

Click any payer row to expand it and see which specific CPT codes are underpaid and by how much.

Section 3 — Rate Comparison Table

A detailed view showing every payer's rate for every tracked CPT code side by side with the Medicare benchmark and your negotiation target.

Use the "Show all codes" checkbox to toggle between showing only underpaid codes (default) and all codes.

Column	What It Means
Payer	Insurance company name
Code	CPT procedure code (e.g. 99214, 90833)
Description	Brief description of the service

Column	What It Means
Payer Rate	What the insurance company currently pays for this code
Medicare	The 2026 Medicare benchmark rate for this code in Florida
% of Med	Payer rate divided by Medicare rate. Color-coded: green = at or above target, yellow = close, red = underpaid.
Target (130%)	What the payer would need to pay to hit your 130% of Medicare goal
Gap/Unit	The dollar difference per claim between what you receive and your target
Volume	Annual number of claims billed for this code (when available)
Annual Gap \$	Gap per unit multiplied by annual volume — the total revenue impact per year
Status	On Target (green) or Underpaid (red badge)

Section 4 — Billing Channel Comparison

Shows how your direct billing rates compare to what intermediary platforms (Headway, Alma, and Grow Therapy) pay for the same services. This helps evaluate whether contracting through a platform is more or less profitable than billing directly.

- Use the payer filter tabs across the top to view one insurance company at a time
- Check “Show only where intermediary pays more” to quickly see where a platform outperforms your direct rate
- The “Best Channel” column highlights whether Direct billing or an Intermediary platform pays better for each code

SECTION 4

Understanding the Numbers

What Is the Medicare Benchmark?

Medicare sets a standard reimbursement rate for every medical service code. These rates are used as a universal reference point for contract negotiations. When we say a payer is at “80% of Medicare,” it means they pay 80 cents for every dollar Medicare would pay for the same service.

What Is the 130% Target?

Solrei’s goal is to negotiate rates that are at least 130% of Medicare — meaning 30% above what Medicare pays. This target reflects fair private-payer compensation for psychiatric telehealth services.

Color Coding on % of Medicare

Color	Meaning
✓ 130%+	At or above target — this payer is paying fairly for this code
~ 117%+	Getting close but still below target — worth monitoring

Color	Meaning
↓ Below	Underpaid — this code and payer should be prioritized in negotiations

SECTION 5

CPT Codes Tracked in This Tool

The tool monitors 12 CPT codes relevant to Solrei's psychiatric telehealth services. These are the only codes that appear anywhere in the dashboard.

CPT Code	Service Description
99214	Established patient E/M, moderate complexity
99215	Established patient E/M, high complexity
90833	Add-on psychotherapy 30 min with E/M
90836	Add-on psychotherapy 45 min with E/M
90838	Add-on psychotherapy 60 min with E/M
99204	New patient E/M, moderate-high complexity
99205	New patient E/M, high complexity
90785	Interactive complexity add-on
98002	Remote therapeutic monitoring (subsequent)
98003	Remote therapeutic monitoring (initial)
98006	Remote physiologic monitoring management
98007	Remote physiologic monitoring management (additional)

SECTION 6

Generating Negotiation Letters & Exporting Data

Generating a Negotiation Letter

Each payer row in the Payer Summary table has a “ Letter” button. Clicking it generates a pre-written negotiation letter for that payer based on live data from the dashboard.

4. Click the “ Letter” button next to the payer you want
5. Review the letter in the pop-up window
6. Click “ Download .txt” to save it
7. Paste into Word or your email client and personalize the contact name and greeting before sending

💡 The letter is automatically filled with the payer's underpaid codes, your current rates, and the revenue gap. Always review it before sending.

Exporting Data to CSV

You can export rate comparison data to a spreadsheet at any time:

- In the Payer Summary table, click “ CSV” next to any payer to export that payer's data
- In the Rate Comparison section, use the “ Export CSV” button (top right) to export everything
- In the Billing Channel Comparison, use “ Export Comparison” to export the channel data

SECTION 7

Uploading Intermediary Rates

When Headway, Alma, or Grow Therapy provides updated rates, the billing team can upload them directly through the dashboard without involving the administrator.

8. Scroll to the bottom of the dashboard to the “Upload Intermediary Rates” section
9. From the “Platform” dropdown, select the platform you are updating (Headway, Alma, or Grow Therapy)
10. Click “ Rate Template CSV” (in the section header) to download a pre-filled spreadsheet
11. Open the file in Excel or Numbers and fill in the allowed_amount column with the new rates
12. Save the file
13. Drag and drop the saved file into the upload zone, or click the zone to browse for it
14. A green confirmation message will appear when the upload is successful
15. The Billing Channel Comparison table updates automatically — no page refresh needed

⚠️ Make sure the date format in the CSV is YYYY-MM-DD (e.g. 2026-04-07). Other formats will cause an upload error.

SECTION 8

Quick Tips

- The dashboard updates in real time — no need to refresh after uploads or changes
- The Payer Summary is sorted by Revenue Gap (largest first) — the top payer is always your highest-priority negotiation
- Clicking a payer row in the summary expands it to show which specific codes are underpaid
- The “Show all codes” checkbox in the rate table lets you see codes that are already at or above target
- Bookmark <http://localhost:8000/dashboard> in your browser for quick access
- If the tool shows a connection error, contact Dean — the server simply needs to be restarted
